

Fire detection for your monitored residential security systems

Fire and security sit together as both can cause untold misery, trauma and even death.

Working seamlessly with the Videofied XL security system, the new generation Videofied smoke detector adds smoke detection to the portfolio of hazards that are already monitored 24/7.

Radio Smoke detector

Our radio smoke detector gives early warning of fire enabling extinguishing and evacuation before a life threatening event occurs.

The Technology Leaders

The Videofied smoke detector incorporates the latest smoke detection technology with wireless detectors that ensure

- > Rapid detection of fire
- > Elimination of false alarms
- > Constant self-monitoring
- > Automatic adjustment to maintain peak performance

Does Your Family Have the best Protection Available?

Your family are the most important thing in your life and they deserve the best protection you can give them.

You do everything possible to provide your family with the best available technology to improve their quality of life; Mobile phones, GPS, Home theaters, Video Gaming Systems, Wireless Connectivity.

The monthly cost for continuous fire protection service is surprisingly affordable. For just a few pence a day you can safeguard your family, your pets and your irreplaceable possessions with 24H fire protection. You will have the peace of mind from knowing they are safe, whether you are across the street or across the globe.

Those who survive a fire, never forget its devastation

Consider the statistics:

- > 80% of all fire deaths occur in the home
- > 3,245 people lost their lives as a result of fire in the US in 2006*
- > 16,400 people were injured as a result of fire in the US in 2006*
- > Fire killed more Americans than all natural disasters combined*
- > 1.6million fires were reported*
Many others went unreported, causing additional injuries and property loss
- > \$11.3 Billion is the estimated cost of property loss due to fire*
- > There are 35,000 fires in homes every year in the UK
- > There is a fire in a home every 15 minutes in the UK

*National fire Protection Association Fire Loss in the US during 2006 and USAF's Fire Fighter Fatalities in the United States in 2006.

Protecting your home and family with continuous protection even at night.

Most deaths from residential fires occur when the occupants are asleep. In the event of a fire, the smoke detector detects the fire at its earliest stage and locally alerts the occupants even if they're asleep through the built in sounder. Simultaneously the Videofied XL system will alert the emergency services to the incident minimising the risk to human life and reduce the amount of damage caused. Insurance companies know this, so a homeowner with fire protection system can typically expect to receive up to 15% discount on home insurance.

	Monitored Detectors	Single Station detectors
Notifies your fire department when a fire is detected	✓	✗
Allows constant monitoring of your home and family	✓	✗
Relies on battery power for your maintenance	✗	✓

Professionally installed fire protection systems monitor the status of your fire detectors. So you know your detectors are powered and functioning properly.

Adding a 24-hour Fire Protection System to your home improves your quality of life and protects those you love.
