

Accessory: Nozzle Extension Piece for PROTECT M80™ & M90™

The Nozzle Extension Piece for the PROTECT M80™ and M90™ extends the fog discharge point by 15 cm, allowing the fog to pass through a wall or ceiling* while the fog cannon stays hidden from view.

Extends fog discharge by 15 cm

Enables the fog to be released through a wall or ceiling while maintaining optimal performance.

Supports discreet installations

Useful for placing the fog cannon behind panels, above ceilings, or in service rooms.

Designed for PROTECT M80 & M90

Exclusively developed for these two models, with easy threaded connections for installation.

Compatible with all APEX nozzles

Works with both the standard nozzle and alternative APEX variants.

Features

- Designed for concealed installations
- For discrete installations through a wall (horizontal) or ceiling (vertical)*
- Makes it possible to increase the distance between the fog cannon and the nozzle

***Notice:** Minor fog dripping may occur after activation when using the extension.

Horizontal installation

Specifications

- Material: Insulated aluminum pipe with brass fitting and casing
- With thread in both ends to connect to the fog cannon and the nozzle
- Total length: 15 cm
- Compatible with fog cannon models PROTECT M80/M90
- Doing concealed installations always keep the front of the nozzle max. 4 cm above the ceiling/behind the wall
- The actual hole in the wall/ceiling should be no less than 4 cm
